Rent your tank container in the configuration of your choice

From individual fittings to various linings - our experienced TWS team customizes the tank container to meet the customer's exact requirements.

We offer tank container concepts for every product, every volume and every deadline.

Standard and swap body tank containers

TWS owns an extensive and modern fleet of 20ft ISO and swap body tank containers for the transportation and storage of liquid chemicals and food products.

A wide range of specifications provides the ideal solution for every requirement.

Lining tank containers

Lined tank containers are specifically engineered for the transportation of aggressive liquid chemicals. Each unit is equipped with a protective coating that shields the cargo from contamination and prevents corrosion of the tank container itself.

Heating and cooling systems

TWS tank containers provide optimal protection for temperature-sensitive goods. Whether heating or cooling, both are easily managed with TWS' advanced and specialized equipment.

Foodstuff tank containers

Foodstuff tank containers are suitable for the hygienic transportation of liquid products such as dairy products, drinks or fats. They can also be equipped with heating or cooling devices and GPS systems.

Mobile tank container storage concepts

TWS provides storage frames and spill troughs in addition to tank containers. They offer temporary, mobile storage. Spill troughs safely contain leaking liquids, preventing them from contaminating soil and water.
